

PROMPTER PROFILE

Marcus Chen

Technical Music Prompt Specialist

ID: PROMPTER-MARCUS-2026-001

Singularity: 1 in 86,956

PROMPTER IDENTITY

Marcus Chen is a technical music prompter who works across AI music platforms (Suno, Udio, MusicGen, Stable Audio, etc.). His prompting style is characterized by precise numerical parameters, fixed structural order, and technical audio engineering vocabulary. While syntax adapts per platform, his core methodology remains consistent.

CORE PROMPT PRINCIPLES (Platform-Agnostic)

Marcus's style is defined by PRINCIPLES that adapt to any platform's syntax:

1. **Numerical Precision** - Always exact numbers, never ranges or qualitative descriptions
2. **Role Specification** - Every element has explicit function defined
3. **Technical Vocabulary** - Audio engineering terms, not casual language
4. **Fixed Parameter Order** - Consistent structure across all prompts
5. **Measurable Values** - Percentages, frequencies, bar counts, not vague terms

STANDARD PROMPT STRUCTURE (Adaptable)

Marcus always structures prompts in this logical order:

1. **Genre Base** (always first, clear categorization)
2. **Tempo Exact** (BPM number or precise descriptor)
3. **Instrumentation** (3-5 instruments with functional roles)
4. **Emotional Vector** (Multi-axis numerical if platform supports, otherwise precise descriptors)
5. **Technical Parameters** (Platform-specific: reverb, compression, filters, etc.)
6. **Structural Definition** (Bar counts, duration, section labels)

EXAMPLE MARCUS PROMPT (Platform-Agnostic Principles)

Genre: Lo-fi hip-hop

Tempo: 87 BPM

Instrumentation: Rhodes electric piano (lead melodic voice), vinyl crackle sample (textural atmosphere), upright bass (sub-frequency foundation), brush drums (rhythmic backbone), ambient pad (spatial fill)

Emotional Character: High melancholy (8/10), Low energy (3/10), High nostalgia (9/10)

Technical Specifications: Reverb wet signal 35%, Low-pass filter at 8000Hz, Stereo field width 60%, Tape saturation subtle, Sidechain compression light

Structure: Introduction 8 bars (piano solo with crackle), Verse 16 bars (full arrangement), Bridge 8 bars (bass feature), Outro 12 bars (gradual fade with vinyl texture)

Note: Above example uses standard music production terminology. Syntax adapts to platform (Suno format vs Udio format vs MusicGen parameters) but principles remain constant.

PLATFORM ADAPTATION EXAMPLES

Suno.ai format: 'BPM: 87, Instruments: Rhodes (lead), vinyl crackle, upright bass...'

Udio format: Adapts to Udio's specific syntax while maintaining exact BPM, role specification, technical parameters

MusicGen: Uses their parameter names (duration_seconds, temperature, etc.) but same precision principle

Key insight: Syntax changes, methodology doesn't. Marcus's signature is in the APPROACH (exact numbers, roles, technical vocabulary), not rigid text format.

TECHNICAL CHARACTERISTICS (Universal)

1. Numerical Precision

Always exact: 87 BPM (not '80-90'), Reverb 35% (not 'moderate'), Melancholy 8/10 (not 'very sad')

2. Role Specification

Every element has purpose: piano (lead melody), bass (sub foundation), drums (rhythm backbone)

3. Technical Audio Vocabulary

Engineering terms: sidechain compression, lo-pass filter, stereo width, tape saturation, not casual 'echo-y' or 'spacey'

4. Structural Bar Counts

Specific durations: 8 bars, 16 bars, 12 bars (not 'short intro', 'long verse')

5. Fixed Logical Order

Never deviates from Genre→Tempo→Instruments→Emotion→Technical→Structure sequence

WHAT MARCUS AVOIDS (Universal)

- Tempo ranges ('80-90 BPM') - Always exact number
- Qualitative only ('sad, slow vibe') - Always quantified
- Artist references ('like Nujabes') - Describes characteristics instead
- Vague instrumentation ('some piano') - Always specifies role
- Flexible structure ('intro, then verse') - Always measured in bars/seconds
- Inconsistent ordering - Same sequence every prompt

USAGE ACROSS PLATFORMS

To use Marcus's style on ANY music AI platform:

1. Learn that platform's specific syntax/format
2. Apply Marcus's principles within that syntax:
 - Use exact numbers (BPM, percentages, scales)
 - Specify instrument roles explicitly
 - Use technical audio terminology
 - Define structure with measurable units
 - Maintain consistent parameter order
3. The WORDS change per platform, the METHOD doesn't
4. Document which platform version you're using (e.g., 'Marcus style for Suno v3')

This approach makes Marcus's prompter style traceable across different AI systems while respecting each platform's unique requirements.
